

Marine Retail Industry Leader

Remediated and deployed security, wireless, and route/switch solutions to meet and maintain current compliance regulatory standards

Company Profile:

HQ: California

Locations: 300+

Employees: 4000+

Revenue: 750M

Overview: North American chain of boating supply and fishing retail stores

Client was facing downward pressure from its business partners in the financial sector. Nearly all the client's infrastructure was outdated and not in compliance with these business partners standards.

After many years of non-complying with a standard infrastructure refresh program, this Marine Retailer was faced with issues affecting business continuity and the security needed to successfully run an efficient chain of stores.

Monreal IT completely redesigned the WAN, WLAN, and LAN environments at Headquarters, 2 large distribution centers, and over 300 retail locations throughout North America. Monreal IT concurrently handled all the logistics and retail store rollouts over a 6-month period, successfully meeting rigorous deadlines and exceeding our client's expectations.

This client no longer has gaps in its compliance model and can focus its efforts on the day to day business of supplying the marine customers of North America.
